Matronics Light Source for Michelin Man on Wheel

Compact 24V LED light source fitting a 19 cm Michelin Man, easily mounted in wheel.

Compact LED light source that fits the 19cm Michelin man sitting on a wheel. The emitters are dual color, but you do not have to use the color switching, and you can decide it just lights one color.

Each light source contains 6 powerful LEDs, embedded in waterproof resin, suitable for outdoor use.

Mounting

Mounting it is very simple, as the man and wheel can be rotated and separated, after which the light source is simply pressed into the wheel. A hole can be drilled in the bottom or side of the wheel for a cable, and everything connects to 24V.

Color Change

Color change can be achieved with a switch, a two-pole relay, or one of our Dual Color Controllers.

The simplest solution is the Dual Color switcher, which changes color upon receiving a signal.
