

Sprayer LED - Power Supply

A powerful power-supply for Sprayer LED lamps. It converts 12V to 24V, so that more lamps can be connected. A 15 metres supply cable.

A powerful power supply for Sprayer LED lamps. The power supply converts 12V to 24V, making it possible to connect the lamps in a one long chain.

The supply has a built-in relay, so you can easily turn off the entire system without having to use external switches. The relay is turned on by connecting it to 12V. In addition, both the fuse on the output and on the input of the power supply are secured.

The power supply is encased in an aluminum housing, ensuring optimum reliability. There are cable glands on the two powerful input cables and on the cable for the relay.

- From two to three M8 female connector at the end.
- 15 metres (6mm²) cable entrance
- A two metres cable for the relay control
