

Mi-Light RGB+CCT Floodlight - 230V

Powerful LED floodlight that has both warm white, cool white and RGB light built in. Wireless control via remote and smartphone.

Powerful floodlight that has both warm white, cool white and RGB light built in, which makes it possible to adjust both color, saturation and color temperature of the white light, and also the overall brightness. At the same time the lamp also has built-in functions that have adjustable speeds. With a total power of 30W, 50W or 100W, there should be plenty of light for most tasks.

The lamp can be used for practical lighting with the white light, and also decorative light with the colors and effects - both indoor and outdoor!

The color selection is done wirelessly with remote, touch-panel or smartphone via a Wifi-bridge.

Remote

The remote is the newest Mi-Light model, that makes it easy to adjust the light color, saturation and color-temperature with the touch panel. There are also buttons for zone-control and setting effects and the speed of these.

The remote uses 2 x AAA batteries, and a practical wall-mount is included with screws and double-adhesive tape for mounting it.

Wifi bridge

With a Wifi-bridge it is possible to control your floodlight through Android or iPhone. You simply need to link the app and the Floodlight. The app and the manuals are all english.

We recommend that you try to install the app on your unit before you purchase, so that you can check the compatibility: [Download app for Apple-units](#) - [Download app for Android-units](#)
