

LED driving light kit, E-approved, 45cm 10 - 30V

Smart solution that matches the Danish National agency's requirements for pair installation. 45cm in total length.

Compact and effective solution where two small ECE-approved lamps are built together to "a single bar" which can be used for additional driving beam. In this way you will match with the requirements of the Danish National Agency for pair-installation and still achieving a strong driving beam.

The lamps are made from cast aluminium, powdercoated with black color, while the frontglass in front of the lenses is impact resistant polycarbonate.

The lamp is easily mounted with the included adjustable stainless steel fittings.

On each lamp sits 45cm cord with no plug. They can be connected to both 12v and 24v vehicles.
